

StockMate

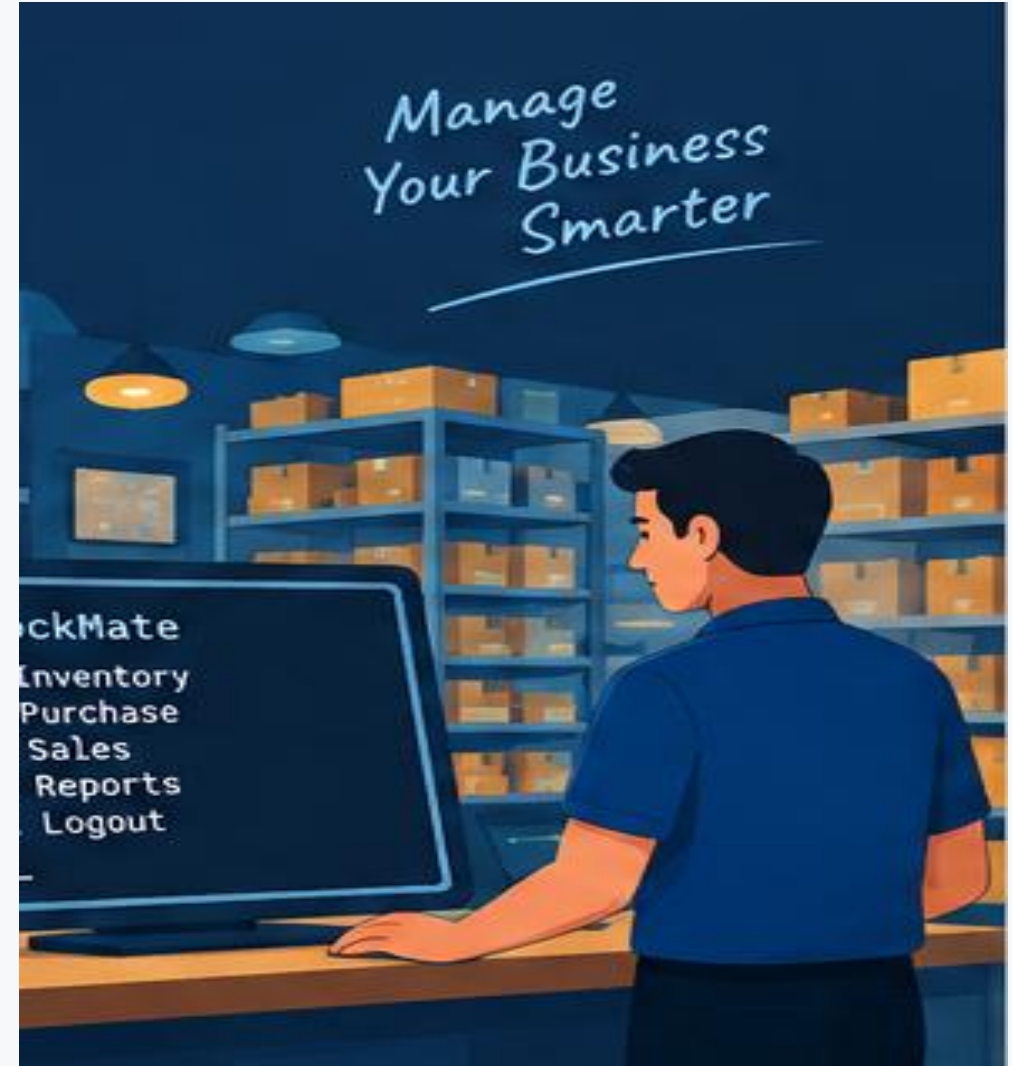

Inventory, Sales & Business Management System

A CLI-based operational management system for small and medium-sized retail businesses

C • Ubuntu Linux Terminal • File-based Storage • DSA

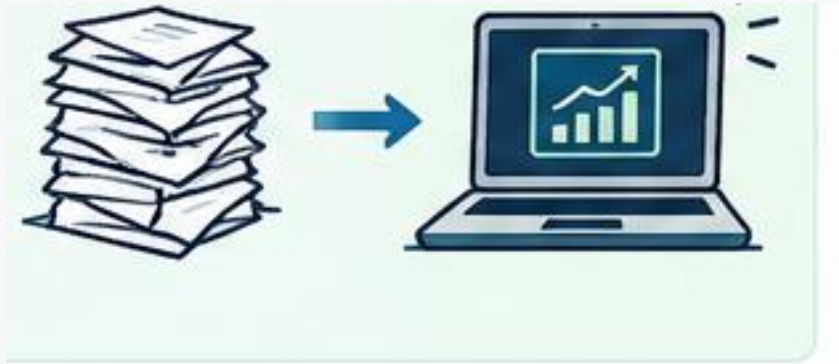

Pritam Dasgupta
BSSE 1745

Supervisor: Dr. Rezvi Shahariar

Why does a small business need StockMate?

The core problem is not only stock—it is disconnected business records.

MOTIVATION

Connect purchase, inventory, sales and business analysis in one lightweight terminal application.

Manual records

Stock, sales and purchases are often tracked separately.

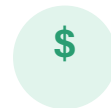

Errors & missed alerts

Calculation mistakes or low-stock items can go unnoticed.

Disconnected information

Business data is harder to connect into one useful view.

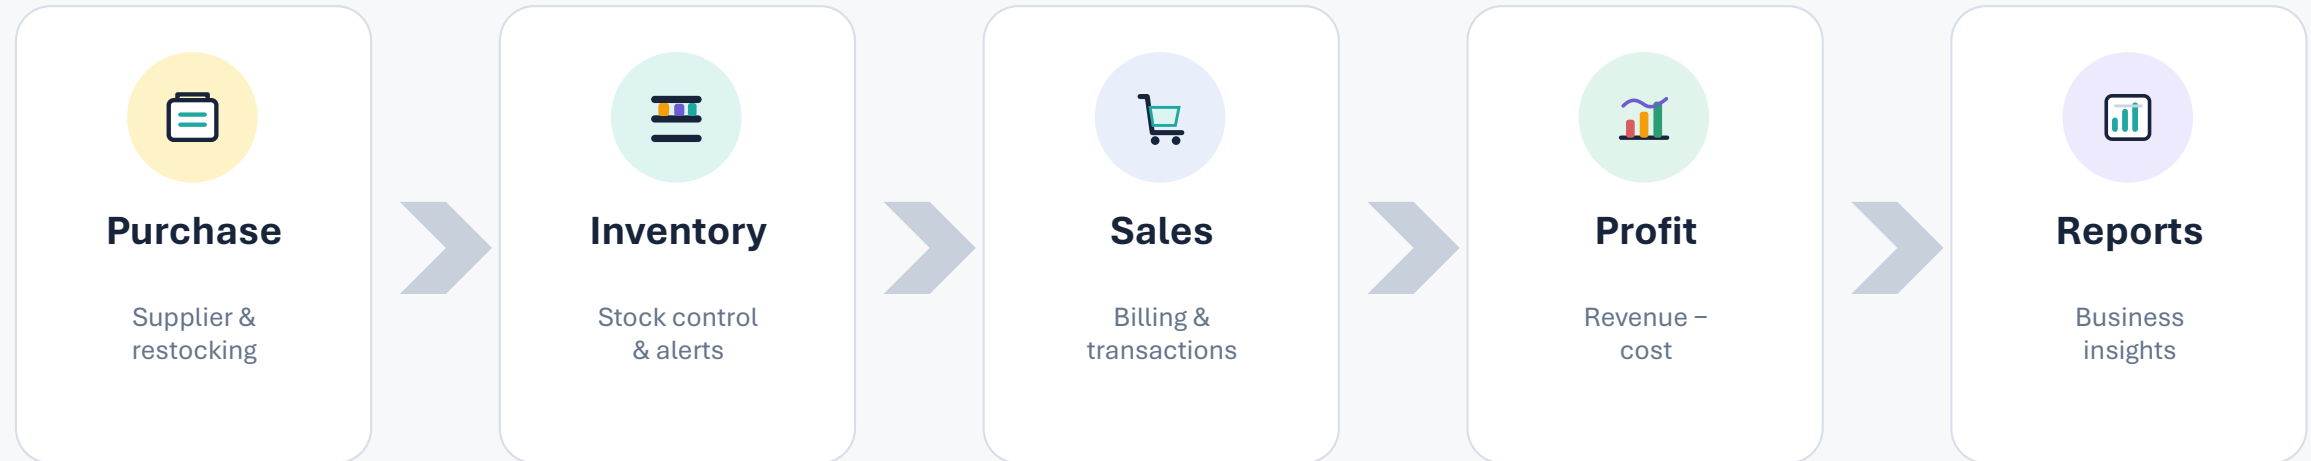

Slow decisions

Revenue, cost and profit insights take extra manual work.

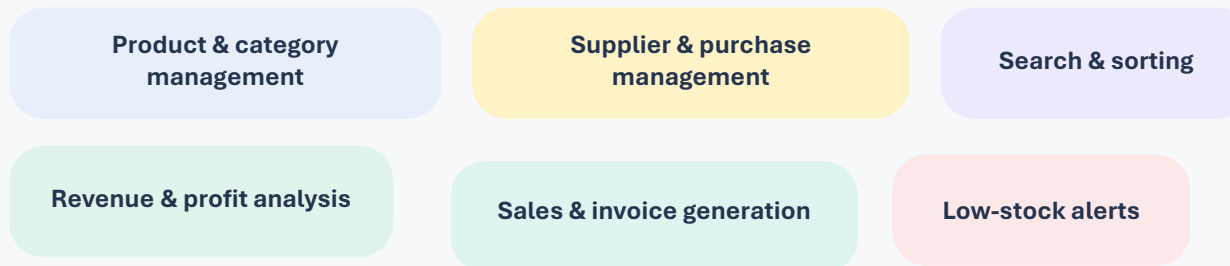

One system, one business workflow

StockMate links the main operational activities of a retail business.

Business focus

KEY FEATURES

```
StockMate - CLI Interface
1. Inventory
2. Purchase
3. Sales
4. Reports
5. Logout
Enter choice: _
```

Who uses it and what will we build?

A focused implementation aligned with the signed proposal.

TARGET USERS

1

Shop owners

Manage products, money & reports

2

Store managers

Monitor stock, suppliers & sales

3

Sales staff

Process sales & invoices

4

Inventory admins

Track stock & replenishment

TECHNOLOGY / TOOLS

C

C Programming

Core application logic

G

GCC Compiler

Build & test

U

Ubuntu Linux

Target runtime

F

File Handling

Persistent records

D

DSA

Search, sort & data structures

EXPECTED OUTCOME

1500+ meaningful lines of C code

Integrated business records • automated calculations •
persistent data • CLI workflow

```
Ubuntu Terminal • StockMate

$ ./stockmate

STOCKMATE INVENTORY SYSTEM

1. Inventory Management
2. Purchase Management
3. Sales & Billing
4. Business Reports

Enter choice █
```

Runs entirely in Ubuntu Linux terminal
